

Full Nature

OUR "FULL NATURE" ECOSYSTEM

Using a natural cycle of fish and aquaculture combined with beneficial bacteria to produce vegetables and protein in an organic nutrient rich environment, free from synthetic fertilizers and pesticides.

AQUAPONICS

There are over 200 enzymes and compounds in fish manure that help plants absorb faster and grow richer: Healthier Produce.

TECHNOLOGY

Best in class solutions: LED, Software automation, Remote monitoring, Clean growing technologies.

USDA ORGANIC

USDA Organic certified since 2015. We fully understand the criteria of securing and maintaining our USDA Organic certification, and our system is based to meet/exceed these requirements.

DEVELOPING IP WITH UNIVERSITIES

Full Nature will have a laboratory on site coupled with a full laboratory via collaborations with select Hong Kong Universities to build out Intellectual Property.

Maximum Nutrients

24/7

Unlike traditional farming where farmers only add fertilizers a few times per month, nutrients are consistently fed to the plants non-stop. It is then circulated back to the fish tank so that nothing is wasted.

Traditional Chinese medicine

Out of more than 600 herb varieties in TCM, we have centered on 10 promising strains to grow on an aquaponics basis.

Vertical Farming

Aquaponics is the key technology to next generation of large scale organic farming. Evergreens Republic has mastered this technique and is ready to deploy it in large scale.

Remote Monitoring

A system that allows growers to monitor key information remotely. Low power LEDs, Climate controlled rooms.

FULL NATURE LIMITED OPEN DAY

July 14, 2018 (Saturday) - 3pm to 6pm

FULL NATURE LIMITED

The address in Chinese and English:
油塘高輝道17號油塘工業城B座
209室

2/F, Room 209, Yau Tong Industrial City Block B, 17 Ko Fai Road, Yau Tong
